# **AWTA PRODUCT TESTING**

Australian Wool Testing Authority Ltd - trading as AWTA Product Testing A.B.N 43 006 014 106

1st Floor, 191 Racecourse Road, Flemington, Victoria 3031 P.O Box 240, North Melbourne, Victoria 3051 Phone (03) 9371 2400

### **TEST REPORT**

Client: Warwick Fabrics Aust Pty Ltd

6-10 Sackville Street
Collingwood VIC 3066

**Test Number** : 17-001690

Issue Date : 21/04/2017
Print Date : 17/01/2020

### Replacement of Report dated: 13/08/2018

Sample Description Clients Ref: "Acapulco, Alanis, Alonzo, Delaunay, Dunard, Martel, Bower"

Dobby woven fabrics - Chenille weft

End Use: Upholstery

Nominal Composition: 58.7% Polyester, 35.3% Acrylic 6% Viscose

Nominal Mass per Unit Area/Density: 496g/m2

Nominal Thickness: 2-3mm

AS/NZS 1530.3-1999 Methods for Fire Tests on Building Materials, Components and Structures

Part 3: Simultaneous Determination of Ignitability, Flame Propagation, Heat Release and Smoke Release

Face tested: Face

Date tested: 21/04/2017

Smoke release, log d 0.0180 -0.8213

Optical density, d 0.1515 / metre

Number of specimens ignited: 6

Number of specimens tested: 6

## **TEST REPORT**

Client: Warwick Fabrics Aust Pty Ltd

6-10 Sackville Street
Collingwood VIC 3066

**Test Number** : 17-001690

Issue Date : 21/04/2017
Print Date : 17/01/2020

### Replacement of Report dated: 13/08/2018

These results only apply to the specimen mounted, as described in this report. The result of this fire test may be used to directly assess fire hazard, but it should be recognised that a single test method will not provide a full assessment of fire hazard under all fire conditions.

Each test specimen had an unattached backing of 4.5mm thick fibre reinforced cement board.

The specimens melted away from the area of maximum heat and produced flaming droplets during the test. Due to this phenomena it should be recognised that this test result may not be a true indication of the product's fire hazard properties.

The specimens melted and flowed away from the area of maximum heat during the test. Due to this phenomena it should be recognised that this test result may not be a true indication of the product's fire hazard properties.

Each test specimen was restrained on the exposed face by a layer of galvanised welded square mesh made from wire of nominal diameter 0.8mm and nominal spacing 12mm in both directions and securely fixed to a backing board at four points each 100mm from the centre of the sample and the assembly clamped in four places.

To allow free movement of sample during testing all corners were folded away from the clamps.
