

Superior Comfort & Support

Manufactured by Intes of Italy for prestige furniture manufacturers throughout the world, the Black Cat® Cushion Support System is recognised by the Furniture Industry for its extreme resilience and high comfort support. These characteristics significantly extend the life of furniture seat cushions.

Black Cat®'s greatest attribute is it's reputation for increasing the life of foam seat cushions. It provides a cushion support foundation that will always offer sufficient "give" when body weight is applied.

Black Cat® can only be installed by machine or speciality hand tool. This means that no variations occur in the cushion comfort or softness.

Black Cat® has been sold to the furniture market for over 20 years. Testimonials exist from manufacturers who have opted for cheaper products only to find a sudden appearance of cushion 'flattening' complaints. Black Cat® stands on it's reputation as a Premium Cushion Support System.

Optimum Strength & Durability

Unlike old fashioned rubber straps, Black Cat® is manufactured from continuous beads of natural latex rubber, wrapped in threads of polypropylene fibre to protect from oxidation.

Together these materials produce high elasticity combined with optimum strength and durability.

Furniture Frame Requirements

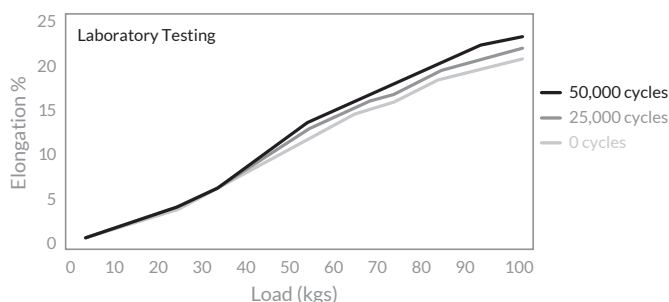

The high tensile strength of Black Cat® requires a well constructed and re-inforced furniture frame to enable machine installation. This distinguishes the quality of furniture frames which incorporate the Black Cat® System and ensures consistant seating and comfort.

Inherently Noiseless

The properties of Black Cat® provide a noiseless and rust proof system that is free from potential metal fatigue.

Quality Assurance

Prior to weaving, the Black Cat® raw materials of natural Latex rubber threads and polypropylene threads are separately Dynamometer tested for consistent stretch, strength and breaking point standards.

The above graph shows that even after repeated stretching over 50,000 cycles at 100kgs, the Black Cat® product maintains it's resilience without collapse. This random testing also checks to ensure no variation more than +5% / - 5% occurs.

10 Year Guarantee - Domestic & Commercial

Black Cat® is guaranteed for a period of 10 years as suitable for premium seating in both domestic and commercial applications.

Description	Item Code	Width (mm)	Stretch %	Rubber Content Index	Roll Size (m)	Quantity Per Carton
 'Black Cat®' Cushion Support	W37410680	80	20	140	100	3 rolls
