

WarGuard Treatment

A Stocked Stain Release Treatment

What is WarGuard?

WarGuard is a protective treatment formulated without harmful chemicals to safeguard furniture against spills and stains for easy living with everyday use.

What makes WarGuard different?

WarGuard is at the forefront of 'Green' technology and has been scientifically formulated with environment, safety and ease, in mind. Available as a stocked option on a range of fabrics, WarGuard is pre-treated with a safe and gentle solution that makes fabric inherently stain resistant for easy cleaning.

How is WarGuard applied?

Depending on the type of yarn and its thickness, the treatment will be applied using either a specialised submersion bath or multi-stream fibre coating system. Both methods of application have been designed to protect the absolute integrity and performance of each fibre and each fabric quality.

How does WarGuard work?

To establish a true protective connection between the treatment and the fabric, WarGuard creates an invisible resistance barrier. The submersion bath method circulates the fibres creating a 360° lamination. The multi-stream method overlays the fibres without damaging their structure to create a protective layer, both minimises stains and makes cleaning more effortless.

Is WarGuard safe?

WarGuard is a non-toxic formula that is free from harmful chemicals. It is flurochem free, carcinogenic free, and free from PFOA/PFOS chemicals making it one of the cleanest treatments on the market.

Is WarGuard environmentally friendly?

WarGuard is a water based, environmentally friendly, solvent free solution that is safe for people, pets and nature.

How to clean your fabric once treated with WarGuard:

For spot cleaning, attend to all spills and stains immediately, dampen a clean white cloth and mop any liquid from the surface removing as much residue as possible. When necessary, use a proprietary cleaning agent strictly according to instructions. We recommend professional cleaning for stubborn stains.

For full cleaning instructions visit our [care labels](https://warwick.com.au/care-labels) page on warwick.com.au

How long will WarGuard last on my fabric?

Generally WarGuard will last 5 professional cleans when cleaned in accordance with our care label and cleaning

instructions. We recommend annual professional cleaning.

Does it take longer to order a WarGuard fabric?

No, WarGuard is a stocked range and is available immediately for dispatch depending on stock levels.

What is the Warranty period for the treatment?

Five years for residential applications.

Three years for commercial applications.

NOTE: Warranty is void if treated post-purchase with an additional third party treatment.

All WarGuard treated fabrics have also been quality tested to Australian standards for performance, durability and safety, backed by the Warwick Fabrics Quality Guarantee.

Can WarGuard be used in commercial applications?

Selected WarGuard products meet commercial performance and abrasion ratings.
