

THOMAS MAXWELL

ARTISAN LEATHERS

*Traditional artisan leather tools*

For countless centuries,
mankind has used and appreciated leather,
for its comfort, aesthetics, and its durability
amid the rigours of everyday life.

Its unique qualities have earned it great
status and timeless appeal.

Todays furniture designers are demanding
even more from leather to satisfy
the desires of a style, comfort and
quality conscious customer.

What makes Thomas Maxwell Leathers special?

Thomas Maxwell Leathers are sourced from countries where moderate climate and farming methods encourage healthier, bigger animals that are less affected by insects, disease and heat.

All Thomas Maxwell leathers are tanned and drum dyed throughout to ensure full colour permeation, after which the leather may be lightly buffed to enhance surface appearance. Full Aniline leather is dyed throughout with no additional top-coat pigments. This technique colours the leather without producing a uniform surface. Visible variations and blemishes will remain once the leather is dyed. Only premium unbranded hide selections are used.

Surface colours are added to provide excellent light fastness, scuff resistance and cleanability. To ensure all leathers are supplied to the best possible quality, each hide is specially rolled on cardboard tubes (not folded). This protects against creasing and marking in shipment.

Thomas Maxwell Artisan Leathers as an Investment

An investment in leather upholstery is significant, but a well-crafted design using premium quality leather will outlast cheaper short term alternatives. Whilst the best tanning methods are crucial to leathers longevity, the real key to leathers strength lies in the natural material itself. Because of its fibrous composition, leather is naturally resistant to rips and punctures and will not 'tear' like vinyl when pierced. In extreme cases, if accidental damage occurs, new leather repair technology allows almost flawless restoration.

Why are Thomas Maxwell Leathers softer and more supple than others?

The experienced and discerning eye of the tannery buyer ensures only the very best hides are selected and the countries of origin are very important. Those affording temperate climate, lush feed and copious water ensure that the leather is naturally soft, unblemished and not 'toughened' by extremes of heat.

Softness and 'hand' are greatly enhanced by extensive 'milling' in large wooden drums and further treatment with fine oil emulsions adds to the final softness of the leather.

How do you know if it's real leather?

Real leather is a natural product with its own distinguishing 'hallmarks'. Among these will be neck and belly stretch marks, natural scarring and growth lines or inconsistent colour between hides as well as grain variations. These marks do not affect its performance in any way and should not be considered a fault. For the discerning buyer, such hallmarking will always display the authenticity of real leather.

All Thomas Maxwell leathers are tested in accordance with stringent international standards. The tannery certification provides reassurance that Thomas Maxwell Artisan Leathers are genuine Bovine (cattlehide) leathers which cannot be confused with cheaper leather, bonded substitutes or 'man made leathers'.

Does leather breathe?

Yes. Real leather is an organic material that is porous and breathes. Leather quickly assumes room and body temperature, thus eliminating extreme heat and cold. Leather is a good insulator because it contains a great deal of air, so as a 'thermostatic material' it remains cool in summer and warm in winter.

Will leather crease and wrinkle?

Most Thomas Maxwell leathers have a soft glove-like feel and will retain their unique suppleness provided they are regularly cared for. During the first few months of use, some minor wrinkles and creases may naturally occur. These are normal and help to provide the soft inviting look which is a characteristic of leather upholstery.

International Quality Standards ISO 9001-2000

Thomas Maxwell leathers are all produced and tested to international standards for properties such as rubbing, flex resistance, light fastness, thickness and strength. Tannery accreditation meets ISO 9001-2000 quality standards. Only the highest quality European dyes and chemicals are used on Thomas Maxwell leathers.

Environmental Considerations ISO 14001-2004

As demands increase for environmentally friendly product, it is reassuring to know that all Thomas Maxwell leathers are produced at the tannery according to the world's most comprehensive environmental management system ISO 14001-2004. One important aspect of which is the treatment and recycling of the tanneries own water supply.

Thomas Maxwell leathers are routinely tested to pass consumer safety standards, including tests for the presence of free formaldehyde.

The supply of leather fluctuates depending on the availability of cattle hides which are by-products of beef and dairy industries. As such leather is a renewable resource produced by recycling hides and skins.

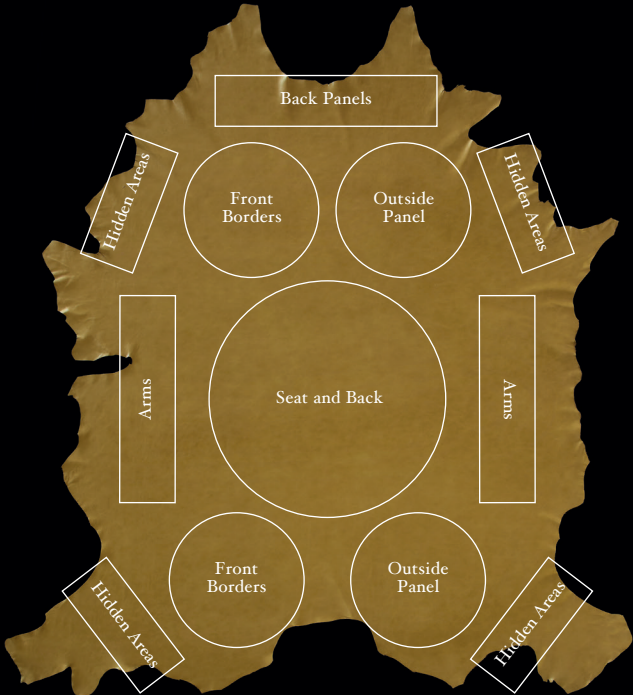

Hides: Langham Club Trench, Glove, Acorn, Cognac

Leather Cutting Guide

Specialist leather cutting optimizes hide yield, minimizing wastage and preserving the essential character. Belly areas are particularly stretchy and should be avoided in seating areas. The more tightly grained parts of the hide, around the butt and backbone, are ideally suited for high usage furniture sections such as seats, arms and headrests. Rough grain or scarred sections are selected for use on less visible areas such as outside backs.

Caring for your Thomas Maxwell Artisan Leather

Regular light surface cleaning of leather furniture is important to prevent daily dust, grime, perspiration and body oils from becoming ingrained and causing surface damage. Obviously, lighter colours may require more attention.

	Keep your leather furniture at least 30cm away from any sources of heat. Prolonged exposure to heating vents or radiators will cause your leather to dry out, crack or harden.
	Avoid placing your leather furniture in direct sunlight. All materials will fade with time when exposed to the sun's rays. Semi-Aniline and Aniline leathers are especially sensitive and must not be placed near windows or in the open air.
	<p>Wax treated Aniline leathers can scratch easily adding to the unique aged 'pullup' appearance. We recommend you do not allow any pets to come into contact with your leather upholstery as their claws may damage it. Animal saliva and other body fluids are highly aggressive.</p> <p>Also avoid letting buckles, studs, zips and jewellery come into direct contact with the leather surface.</p>
	<p>All leathers last longer when preventive maintenance is carried out. As a general rule, clean your furniture with Leather Soft Cleaner at least every six months to remove dirt as well as the gradual accumulation of body oils and perspiration.</p> <p>For Aniline and pigmented leathers, apply Leather Protection Cream to the surface of the leather to increase resistance to staining and prevent grime build up. Aniline leathers are highly absorbent and may require more frequent cleaning if they are subject to heavy usage.</p> <p>After cleaning, always re-apply Leather Protection Cream to renew the level of protection. Take special care to protect areas subject to heavy use such as armrests, seats and headrests.</p>

Thomas Maxwell Leather Quality Guarantee

For a period of three years, for both domestic and commercial applications, we guarantee to replace any leather which is found to be faulty as a result of manufacturing defect and which has been used in accordance with our performance ratings and care instructions.

This guarantee is additional to all statutory rights and remedies that are available to our customers under consumer law.

	<p>Dust weekly or use the soft brush attachment on your vacuum cleaner. Wipe clean using a soft damp cloth and Leather Soft Cleaner.</p> <p>Leather is particularly suited to people who are allergic to dust. Particles of dust are unable to penetrate leather and can easily be removed.</p>
	<p>Avoid all products containing solvents or oils, as they could damage the surface of the leather. Keep everyday materials such as fly/insect sprays, newspaper ink, nail polish/removers, pen inks, plant food sprays, hair creams & gels, glue and household cleaners including bleach well away from your furniture. If you do need to use these near your sofa, make sure you cover it first.</p> <p>Note: If leather furniture is used by individuals on some medications, extra care should be taken to protect leather from direct skin contact as the chemistry in these medications may react with and damage the leather finish. Headrest covers and arm protectors are advisable.</p>
	<p>Do NOT use care instructions on Nubuck or Suede leathers.</p> <p>Do NOT use saddle soap, wax polishes or spray polishes. These can dry out the leather or add an unpleasant sticky surface which will attract daily grime.</p> <p>Do NOT use any product or any method of cleaning not recommended by the manufacturer.</p> <p>Note: Jeans and other non colourfast clothing can cause colour or dye transfer which is not covered by guarantee.</p> <p>Note: All leather colours will be supplied within commercial shade tolerances, however some natural colour variations may occur from batch to batch as no two hides are alike and react differently to dye treatments. If colour matching is critical, please contact our sales office.</p>

*Test standards for Pull Up upholstery leather vary from Pigmented leather.

The background of the entire page is a repeating pattern of a stylized crest. The crest is divided into four quadrants: the top-left and bottom-right quadrants contain a cross, while the top-right and bottom-left quadrants contain a lion passant guardant. The crest is topped with a battlement. The pattern is set against a dark background with thin, light-colored diagonal lines forming a grid.
