

Renew

reuse recycle refit

Warwick believe we all have a responsibility to reduce our impact on the environment. RENEW fabrics give our post consumer waste a new life and diverts it from disposal into landfill and our oceans. RENEW eco-friendly textiles are sustainable and functional while being kind on the earth.

RENEW is the perfect choice where quality, performance and low environmental impact matter.

RENEW fabrics must have a minimum requirement of 50% recycled yarn. Many of our qualities are have a higher percentage.

1

Diverts waste from landfill and oceans

RENEW fabrics reuse perfectly good material instead of throwing it away. Our recycled polyester yarn suppliers state that 24,000 bottles are used to create 0.25kg of recycled polyester yarn. Recycled wool re-uses wool from fashion garments and other woollen textiles.

2

Reduces Environmental Impact

RENEW fabrics reduce overall energy consumption by up to 35% compared to virgin materials and reduces usage of dyes, chemicals, and waste water from the textile production process.

3

Better for the climate

Producing recycled polyester is better for the climate, creating up to 75% less CO2 emissions than virgin polyester. Recycled polyester yarns lessens our dependence on petroleum as a source of raw materials and prolongs our waste from entering landfill or incinerators. It also eliminates a significant proportion of the textile manufacturing process thereby reducing the resources required in textile production.
